WHITE PAPER
CoreInu

Introduction

Since CoreInu is a token with 0% TAX, we will register a new Token in LFGSWAP, the purpose of this Token is to assist CoreInu growth and make CoreInu ecology more perfect

With the ultimate goal of building a virtual reality meta-universe ecosystem that spawns multiple decentralized application scenarios, the Core Inu community aims to create a digital community with access to an infinite multiverse. Through Core Inu-based asset trading activities, data and other behaviors, users are incentivized with a number of tokens based on contribution value and combined computing power, with higher contribution values rewarded with more Core Inu tokens.

Core Inu's meta-universe ecosystem mainly consists of four segments: NFT, Gamefi, DeFi, and Web3, and a new LP pledge mining operation model is built on the basis of the four segments, where players can acquire NFT through a blind box, and the acquired NFT can be traded through the DeFi system. In addition, players can use Core Inu's Web3 social scene to create their own Meta-space for their characters.

Utility

Gamefi
In the future Core Inu will release the NFT Token card game to earn USDT/ETH rewards through the game

Staking
Users holding $Core Inu NFT Token can participate in Stake and earn significant revenue

Foundation
Core Inu will establish a foundation to maintain community order and later marketing to make Core Inu stronger

NFT Token
Pledge mining ecology for NFT Token users later, thus increasing $core Inu liquidity

Mission & Values

Core Inu provides a more secure and efficient network for the NFT and Meta-Universe commodity trading marketplace using advanced multi-chain + cross-chain technology. Core Inu's Web3.0 architecture provides user-friendly trading scenarios for users to easily, quickly, and securely create, buy, sell, or exchange NFT and metaverse commodities, and Core Inu supports NFT in a range of smart contract networks, including ARB Chain, Opensea, etc., bringing unlimited possibilities for NFT trading and derivation.

The possibilities for NFT trading and derivation are endless.

In the Core Inu platform, NFT-based assets can be interfaced into the virtual metaverse world to create dream connections with the metaverse. For example, NFTs can be pledged to generate a specific series of utility scenarios for the metaverse, pledge proceeds, etc., providing digital currency value transfer to the virtual world. In the Core Inu metaverse ecology, the carrier of value delivery is blockchain technology. Through decentralized virtual asset equity records and virtual identities, blockchain technology provides a decentralized clearing and settlement platform, thus constructing a perfect value delivery mechanism.

Core NFT Ecosystem

What is Core NFT?

The Core Inu ecosystem will create a new NFT synthesis protocol that allows users to synthesize assets and mint them to produce The synthesized new Token can be used to generate interest online and is the proof that the user has deposited assets in the Core Inu ecosystem. In the lending market, locked funds can only be used after they are unlocked, and when they are withdrawn, the amount of funds credited to the lending pool is also reduced.

With the introduction of the new Synthetic Token, this side effect can be avoided because the funds deposited on the Core Inu ecosystem will circulate on the open market in the form of a new Synthetic Token, without affecting the locked funds on the platform and therefore without reducing the amount of funds available to lenders, while NFT can be pledged for future mining for high returns and increasing liquidity.

New Token:NFT TOKEN

Uses.

NFT Token will perfectly assist Core Inu growth, NFT Token will set up a token with a tax mechanism, the tax generated will be used to develop NFT and buy back Core Inu to increase sufficient liquidity

Benefits

We will give CoreInu users a generous benefit in return, if you hold CoreInu we will give you a whitelist of CoreInu tokens needed for destruction through Mint

DEFI: NFT TOKEN

Core Inu is at the forefront of the DeFi space by creating a new DeFi financial model with the introduction of "LP Concentrated Liquidity", an approach that allows LPs to provide liquidity in a specific price range,

rather than having to accept liquidity across the entire price range (zero to positive infinity) like other decentralized trading models. "Concentrated LP liquidity" amplifies the gains and impermanent losses of LPs, making this a new and more efficient LP model.

LP centralized liquidity mode Users can use CoreInu and NFT TOKEN to form LPs for pledging to tap NFT TOKEN or CoreInu to make liquidity more abundant

Some celebrity attention, while our tokens hit

DIRECTIONS
How to buy $Core In

Step 1

Add Core's mainnet in the wallet!
Core main network parameters
Network name: CORE
RPC URL: https://rpc.coredao.org/
ID: 1116
Symbol: CORE
Block Explorer URL: https://scan.coredao.org

Step 2

Prepare bnb (handling fee) and USDT on Binance Chain，Open https://icecreamswap.com/swap with the browser that comes with the wallet

Click the bridge in the middle below, and then use the USDT in the Binance Chain (USDT is preferably an integer without a decimal point, and the problem is the VPN problem) to convert to the core chain, and fill in the core address

Step 3

After completing the transfer, add it in the core chain ①coreinu contract address: 0x6e35ff7ac8eeb825ddb155515ef612adcd66bcbc ②USDT contract address: 0x81bcea03678d1cef4830942227720d542aa15817
Open IceCreamSwap.com
Click the first trade below, and choose to buy coreinu with USDT. CoreInu is a whitelist project, direct search without contract
